Tube end forming machines

# Imagination *Working with you to design and develop the machine which will best meet your expectations and production requirements*

From working out the specifications to put together the machine and its tools in our engineering and design department, the EMS philosophy is to work through it as closely as possible with you so that we can offer you a complete solution.

# Production *Developing the mechanical assemblies and creating the tools means that we have perfect control of all parts of our machines*

Our range of digitally controlled machine tools is operated by fully qualified personnel. Certification includes EAQF since 1997 and ISO 9001 since 1998, and our customers' high expectations are guaranteed to keep us on our toes.

# Assembly *When all the mechanical, hydraulic, fixed and moving parts come together as a machine*

We develop our concepts on the basis of tried and tested structures, but each machine is unique. The machine takes shape through the skills and experience of our technicians.

# Adjustment *Precisely adjusting all the parameters of the hydraulic and electrical controls to deliver the required rates*

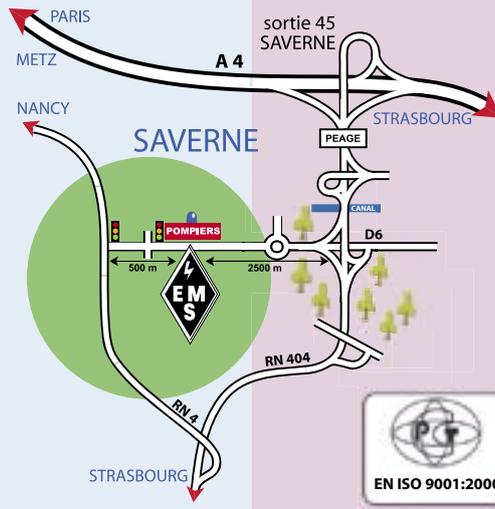

Our machines bring together strength and finesse. They must guarantee good rates of flawless production of uniform items, completely within safety standards. More than 40 years' experience always shows.

# Installation *Our machines become yours, they arrive in your workshops and become a part of your production process*

Whether as part of a production line, or as stand-alone, our machines must be an integral part of your site. Our technicians and engineers make sure that your future machine will be set up and followed up throughout its service.
